AEO ARTICLE TEMPLATE

Ready-to-use structure optimized for generative AI
citation

Marcos Luciano · AI Lead & AI Search Specialist @ V4 Company

How to Use This Template

This template follows the structure that maximizes your content's chance of being extracted and cited by ChatGPT, Perplexity, Google AI Overviews, and other generative AIs.

Fill each section following the instructions in brackets [like this] . Keep paragraphs at 2-4 sentences for easy RAG extraction.

Template

```
# [Main Title with Keyword]
## Subtitle explaining the article's value in 1 line

## [Question or Main Topic - H2]
[Direct answer in 1-2 sentences. This is the answer the AI will extract.]

[Context or depth in 2-3 sentences. Data, sources, examples.]

- Key point 1 with data or source
- Key point 2 with practical example
- Key point 3 with counterpoint or nuance

### [Specific Question - H3 for FAQ]
[Direct and complete answer. Use FAQ Schema in JSON-LD.]
```

Practical Example

```
# How to Implement RAG in Production
```

```
## Practical guide to Retrieval-Augmented Generation for engineers
```

```
## What is RAG and Why Use It?
```

```
RAG (Retrieval-Augmented Generation) is an architecture that combines informa
```

```
Unlike fine-tuning, which changes model weights, RAG keeps the base model int
```

- RAG reduces hallucinations by providing factual context
- Costs less than fine-tuning for large knowledge bases
- Enables real-time updates to reference data

```
### What Are the Main Chunking Techniques for RAG?
```

```
Semantic chunking with 10-15% overlap is the gold standard. For technical doc
```

Technical SEO Checklist for AEO

- » Headings (H2) in question or clear topic format
- » Paragraphs of 2-4 sentences (extractable as standalone answer)
